## AI Dynamic Face Recognition & Fingerprint Attendance With Door Access

# TT-53AI

biometric device that features AI dynamic face scan technology, allowing for lightning-fast recognition and easy detection of faces even in low light conditions. This device can also perform face scans even when users are wearing masks. In addition, it offers a large fingerprint storage capacity of up to 10,000, making it perfect for medium to large enterprises. Its powerful NPU processor ensures speedy and efficient performance, making it an excellent choice for any business in need of a reliable and advanced biometric solution.

Wear Glasses

Makeup

Mustache

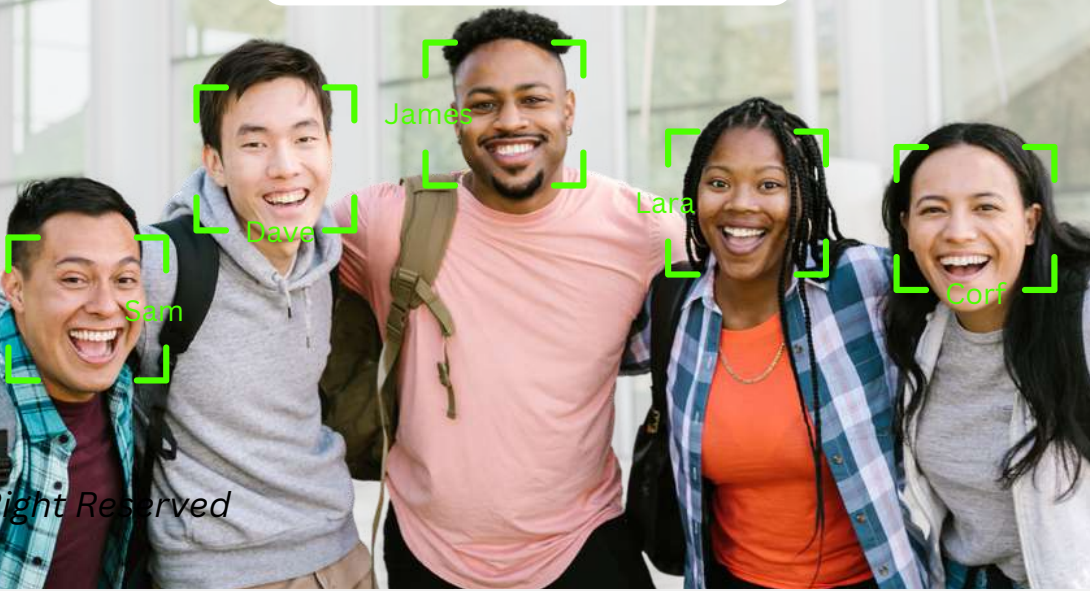

Wear Hijab

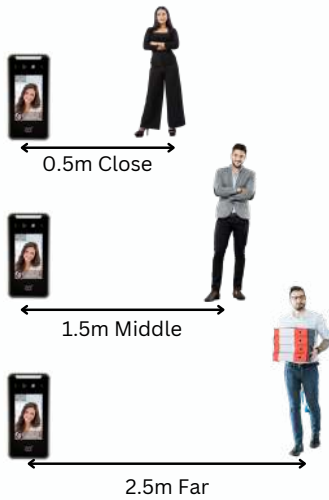

Wear Mask

**Up to 5 People detection**

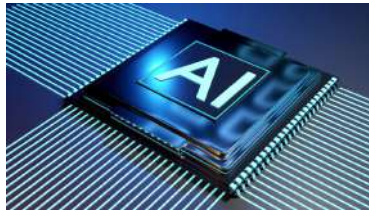

Flexible Face Recognition Distance  
**0.5~2.5 Meters**

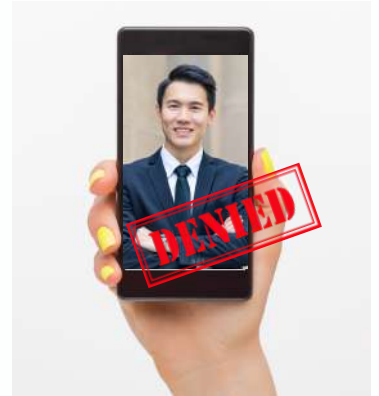

### What is NPU

NPU stands for Neural Processing Unit, which is a specialized microprocessor designed for performing AI and deep learning tasks. It is typically integrated into devices such as smartphones, cameras, and other electronic devices that require high computing power to perform complex AI algorithms. An NPU is optimized for processing large amounts of data simultaneously, making it an efficient and effective solution for AI-related tasks.
